

Why is TOPIA Better Than Rapid7 InsightVM?

See How Topia Stacks Up Against the Competitor

At Vicarius, we believe that periodic scans requiring on-premise appliances and a separate tool for patch management is no longer a winning strategy when it comes to vulnerability management.

WHY TOPIA?

Competitive Advantages Table

Feature Name	TOPIA	RAPID7
Vulnerability Scanning	<ul style="list-style-type: none"> TOPIA is continuously detecting and reporting new vulnerabilities in your environment. Using lightweight agents and an intuitive cloud dashboard, you will always be informed on the current active CVEs in your environment at all times. 	<ul style="list-style-type: none"> InsightVM is an agent based vulnerability scanning and assessment solution.

<p>Vulnerability Remediation</p>	<p>✓ TOPIA not only detects vulnerabilities but also has the tools to remediate them. Depending on the nature of the vulnerability, TOPIA has a corresponding mitigation method available.</p>	<p>○ InsightVM is able to track and display some metrics on remediations but is not able to facilitate the remediation itself without relying on additional solutions or integrations.</p>
<p>Contextual Prioritization</p>	<p>✓ TOPIA goes beyond basic vulnerability detection by analyzing and weighing additional risk factors associated with each vulnerability. From there, the prioritization engine automatically assigns an easy to read risk score so you know where your security and IT teams need to spend the most time and energy.</p>	<p>○ InsightVM largely relies on external threat intel for prioritization. They also offer a "tagging" system to address the context of assets but this solution is highly manual and easy to misconfigure.</p>
<p>Patch Management</p>	<p>✓ TOPIA makes patch management easy. OS and 3rd party app patches are automatically aggregated in TOPIA for you and are able to be installed on endpoints through one time patches as well as through automations.</p>	<p>✗ InsightVM does not offer any patch management. This means you will need additional tools to address this stage of the vulnerability lifecycle with InsightVM - this increases risk, effort, and cost.</p>
<p>Continuous Assessment</p>	<p>✓ TOPIA's agents report the latest vulnerability data to a cloud dashboard in real time. Vulnerabilities can be introduced into an environment through a new vulnerability being published, a new app being installed, and new devices joining the network. Not having to wait until the next scheduled scan to detect these is an important component in reducing organizational risk.</p>	<p>✓ InsightVM offers live dashboards where agents frequently update vulnerability data and various analytics.</p>
<p>Great Overall Value</p>	<p>✓ All of TOPIA's features are included for one price which is simply based on the number of agents. The reduction in risk and effort required provides partners and end customers with fantastic ROI.</p>	<p>✗ Because of the requirement of using multiple solutions to cover the entire vulnerability lifecycle when using InsightVM, it does not offer as good value as TOPIA.</p>
